There is a concern that Superfund should have contacted Illinois EPA as well as IDEM. However, at least contacted the Water Division due to the location of the intakes.

Mike/Steve: Attached are the locations and results of VOC sampling conducted last week by Chicago's Dept of Water Management. It looks like everything was non-detect. Chicago felt that they needed to take some samples at and around their South-side crib. Since they were not part of the response, they were not getting much information about the spill.
